Zurich, Switzerland

DESCRIPTION OF THE JOURNAL

Microbial Ecology, an international journal, will accept papers in those branches of ecology in which microorganisms are involved. Articles describing significant advances in the microbiology of natural ecosystems will be considered as well as those describing new methodology. In addition, the journal will accept reports describing microbiological processes associated with environmental pollution, and papers describing the ecology of all microorganisms including procaryotes, eucaryotes, and viruses will be published.

The exclusive copyright for all languages and countries, including the right for photomechanical and any other reproductions, also in microform, is transferred to the publisher.
The use of registered names, trademarks, etc. in this publication does not imply, even in the absence of a specific statement, that such names are exempt from the relevant protective laws ans regulations and therefore free for general use.
